

Comments on Mayflower indoor air QASP:

Page iii lists Appendices A through G, however, **page 1-2** only lists A through D. Appendix Titles also do not match for all appendices between pages iii and 1-2. Please address this inconsistency.

Page 2-5, Section 2.2.2: Define PRP. If this refers to Potentially Responsible Party (i.e., Exxon), then that should be explained.

Page 2-5, Section 2.2.2: A lower than 3-feet breathing zone should be included for any residences having infants or toddlers. They are likely to regularly be lower than 3 feet above ground.

Page 2-5, Section 2.2.2: "regular" should be "regulator"

Appendix C, DQOs: ADH (or other source) action levels for indoor air exposure are not yet filled in. Have those values been determined? If so, please share.

Appendix C, DQO Step 7: An appropriate background sampling location needs to be determined and approved before any sampling takes place.
